

FOR IMMEDIATE RELEASE

UDC Designs announces new services

Web hosting and domain name registration now available

October 13, 2005

Ujhelyi Designs & Consulting (UDC Designs), was formed by Tiffani McGainey to meet the web design and development needs of companies, organizations, and individuals in Sumter and the surrounding areas.

Our Mission is geared to provide creative, but effective, professional websites for companies, organizations, and individuals through website design and consulting.

New UDC Designs is please to announce the services of domain name registration and web hosting is now available at unbeatable prices.

Defining and registering the right Internet domain is one of the central elements in building an online presence. UDC Designs offers a wide variety of generic and country-specific top-level domains (TLDs) to choose from. With UDC Designs, you will always be offering registration and transfer of .com, .net, and .org domains.

Whether you are an individual Web site owner or a large-scale e-business, our hosting plans enable you to meet their needs. Each plan is based on secure, reliable architecture and provides ample storage and data-transfer capability. All hosting plans offer generous disk space and data transfer quotas, free e-mail and e-mail forwarding accounts, as well as MySQL and Access database support. Additionally, hosting customers will have access to advanced traffic statistics through the optional Traffic Facts service.

In additional to web hosting and domain names, we also offer domain forwarding, online file folder, e-mail packages, SSL certificates, virtual dedicated servers and dedicated servers, fax thru email, and quick shopping cart.

Domain name forwarding allows you to register and point a domain name to another Web address. This means that you can register multiple domains, such as variations of a company name, and point them all to the same address. Thus, when an Internet user attempts to access the forwarded domain - by

typing the domain into a Web browser, for example - the visitor will be redirected to the Web address to which the domain is being forwarded.

Online File Folder, which can be conveniently integrated with our Web-Based Email, client provides a safe and convenient solution for file backup, storage and sharing. Password protection and virtually unbreakable industry-standard 128-bit encryption keep stored content safe from tampering. Stored files can be accessed from any Internet connected computer.

With our robust, feature-rich e-mail services we can offer you secure, personalized, and spam-free e-mail - with a plan that will suit the needs of any business or individual. All e-mail account plans come with free Web-Based Email - our advanced Internet-based e-mail client that incorporates Spam Xploder spam protection technology and SMTP relay.

Add-ons like Online File Folder, Online Group Calendar and Fax Thru Email are seamlessly integrated with the Web-Based Email user interface. Built-in anti-phishing measures shield you from attempted fraud as e-mail based phishing schemes are intercepted before they reach your mailboxes.

E-mail accounts can be set up to any domain name a customer owns, regardless of where it is registered or hosted. This means that the customer can personalize his/her e-mail address - e.g., name@domainnamegoeshere.com.

While online retail is continuing its explosive growth so, unfortunately, are phishing, pharming, identity theft, and other types of malicious cyber crime. Our SSL certificates - built around stringent, industry-leading authentication measures - allow you to secure all online transactions with up to 256-bit encryption. An SSL certificate on a Web site ensures that sensitive data is kept safe from prying eyes. Our SSL certificates are processed, signed, and issued by trusted Certification Authority Starfield Technologies. A Turbo SSL certificate can be signed and issued to a customer in a matter of minutes. High Assurance SSL certificates, which rely on a meticulous, manual authentication process, can be issued in a few hours.

Virtual dedicated servers allow us to cater to those hosting customers that need something more than the typical shared hosting format. A virtual dedicated server is the perfect, affordable solution for customers that wish to operate multiple Web sites, traffic-intensive Web sites, gaming servers, or simply want unlimited control of their server space through root (admin) access. Highly scalable, virtual dedicated servers offer many of the capabilities and features of dedicated servers but at a much lower price.

A dedicated server provides the user with complete control of server usage and software installation, through admin (root) access to the server. Unlike normal hosting plans, which put many customers' accounts on a single server, a

dedicated server grants its user exclusive rights to the server's bandwidth, memory and storage space; performance will not be affected by traffic and usage patterns of other customers. Dedicated servers are particularly useful for companies and individuals that run very-high-traffic Web sites or applications and thus need the bandwidth, versatility, and consistent performance of a dedicated box. This means that the server can be used for a virtually unlimited variety of purposes, including gaming, database management, and hosting and management of multiple traffic intensive Web sites.

Fax Thru Email provides you with a quick and affordable means of sending and receiving faxes through any U.S. - or Canada-based Internet connection. A convenient alternative to expensive telephone connections and dedicated fax hardware, Fax Thru Email uses electronic mail to send and receive faxes. To send a fax via Fax Thru Email, the user simply composes the content and attaches it to an e-mail message. Incoming faxes arrive in the user's e-mail inbox, converted into printable PDF format.

Quick Shopping Cart lets you claim your share of the booming e-commerce industry by allowing you to build attractive and versatile online storefronts in a few quick steps. The program includes Web hosting and comes with a variety of advanced features that allows you to set up and run a successful e-commerce business; including built-in payment options for cash, credit card and PayPal; and integrated shipping services using UPS and the U.S. Postal Service. Quick Shopping Cart even allows you to set up eBay auctions and submit products to the Google-operated Froogle shopping search engine.

Domain name registration prices are starting as low as \$10.00 a year and web hosting starting as low as \$5.00 a month.
